

Specification Amendments

Page 4, paragraph at lines 10-14:

The mesh is knit preferably to have a density of less than about 60% of solid density, more preferably less than about 55% or 50% of solid density, and most preferably about 25% solid density, down to about 15% density (although the strength of such a very ~~density~~ dense structure may not be sufficient for certain diesel trap applications).
